PROFESSIONAL SUMMARY

- Senior Java Backend Engineer with **5+ years of experience** designing and delivering **high-scale, enterprise-grade distributed systems** across banking and healthcare domains using **Java 8, 11, 17, and 21+**.
- Strong expertise in **core Java fundamental** including Collections, Exception handling, Streams, Lambdas, and functional programming constructs used extensively in production systems.
- Extensive hands-on experience with **asynchronous** and **concurrent programming**, leveraging multithreading, Executors, Futures, and CompletableFuture to build low-latency and high-throughput backend services.
- Proven ability to design and implement **microservices-based architectures** using Spring Boot and REST APIs supporting mission-critical transactional workloads.
- Experience applying **reactive and non-blocking backend patterns** to improve scalability, throughput, and efficient resource utilization.
- Strong background in **high-scale system design, performance tuning, and production issue diagnosis**, including JVM-level analysis in regulated enterprise environments.
- Strong experience with build and testing tools, including **Maven, Gradle, and JUnit**, supporting automated builds, dependency management, and reliable unit testing in enterprise Java applications.
- Hands-on exposure to **modern Java 21+ capabilities**, including Virtual Threads and improvements in concurrency models.
- Practical experience integrating **AI and LLM-powered capabilities** into backend systems for automation, summarization, and intelligent data processing workflows.
- Solid understanding of **event-driven and messaging-based architectures** using Kafka and RabbitMQ for asynchronous communication.
- Experience deploying and supporting backend services in **containerized environments** with exposure to **public cloud platforms (AWS, Azure)**.
- Experience leveraging AI-assisted development tools to support debugging, documentation, and optimization of complex backend logic.

TECHNICAL SKILLS

Languages: Java 8 / 11 / 17 / 21+, JavaScript, TypeScript, Node.js, Python, SQL

Core Java: Collections, Streams, Lambdas, Exceptions, Multithreading, Executors, Futures, Virtual Threads(Java21+)

Frontend: React.js, Next.js, HTML5, CSS3, Bootstrap, Angular

Backend: Spring Boot, RESTful APIs, Microservices, Node.js

APIs: REST, SOAP, gRPC

Messaging: Kafka, RabbitMQ, event-driven processing

Cloud Platforms: AWS (EC2, Lambda, S3, RDS, Aurora, Cognito, CDK), GCP, Azure

DevOps: GitLab CI/CD, Jenkins, Docker, Kubernetes, Terraform, Maven, Gradle

Databases: MySQL, PostgreSQL, Oracle, MongoDB, DynamoDB, Redis

Testing: JUnit, integration testing

AI/LLM Tools: LangChain, Hugging Face, OpenAI API, Github Copilot

Version Control: Git, GitHub, CI/CD Pipelines

WORK EXPERIENCE

Citi, San Francisco, CA

April 2025 – Feb 2026

Senior Java Developer

- Architected and developed **high-performance Java backend services** using **Java 17/21+** and **Spring Boot**, supporting mission-critical financial platforms with strict requirements for latency, throughput, security, and fault tolerance.
- Designed and implemented **REST-based microservices** handling high transaction volumes, enforcing consistent API contracts, centralized error handling, and backward compatibility across consumers.
- Applied **advanced Java concurrency constructs**, including Executors and CompletableFuture, to optimize asynchronous workflows and reduce blocking operations in high-load environments.
- Leveraged **Java Streams and Lambdas** extensively to simplify complex data processing pipelines and improve maintainability across service layers.

- Contributed to **high-scale system design discussions**, addressing scalability, resiliency, failover strategies, and graceful degradation in distributed architectures.
- Performed **hands-on performance tuning and production diagnostics**, analyzing thread dumps, heap dumps, GC behavior, and JVM metrics to stabilize critical services.
- Integrated backend services with **Kafka** and **RabbitMQ** to enable asynchronous, event-driven communication between distributed systems.
- Designed and integrated **AI/LLM-powered backend components** to automate financial report summarization and intelligent data analysis workflows.
- Evaluated and adopted **modern Java 21+ features**, including Virtual Threads, to simplify concurrency handling and improve service throughput.
- Supported containerized deployments using **Docker** and **Kubernetes** across **AWS** and **Azure**, ensuring resilient, compliant runtime environments.

Express Script, Austin, TX

Aug 2023 – April 2025

Senior Java Developer

- Designed and implemented **Java 11/17 backend microservices** using Spring Boot to support large-scale healthcare and claims-processing platforms operating under strict regulatory requirements.
- Developed **RESTful APIs** with a strong focus on reliability, performance, and data integrity across distributed healthcare systems.
- Implemented **asynchronous** and **concurrent processing models** using Executors and CompletableFuture to improve system responsiveness during peak workloads.
- Applied **core Java constructs** including Collections, Streams, and Lambdas to build clean, maintainable, and efficient backend services.
- Utilized **reactive** and **non-blocking backend patterns** to improve resource utilization and reduce thread contention in latency-sensitive workflows.
- Conducted **JVM performance analysis** and **tuning**, reviewing thread behavior, memory utilization, and garbage collection patterns to improve system stability.
- Integrated backend services with **Kafka** and **RabbitMQ** to enable reliable, event-driven processing across microservices.
- Implemented **JUnit-based automated testing strategies** to validate business logic and reduce regression defects.
- Supported CI/CD pipelines using **Maven**, **Git**, and **Jenkins**, contributing to consistent and automated deployments.
- Collaborated on **AI-assisted backend workflows**, leveraging LLM-based tools to enhance data processing and operational efficiency.
- I used AI-based coding tools to accelerate debugging and improve test coverage.

US Bank, Irving, TX

Jul 2022 – Aug 2023

Java Developer

- Developed and enhanced **Java 8/11 backend services** supporting core banking applications with strict requirements for transaction integrity and consistency.
- Built and maintained **REST APIs** using Spring Boot aligned with enterprise security standards and compliance requirements.
- Implemented **multithreaded** and **concurrent processing logic** to support high-volume banking transactions with predictable performance.
- Utilized **Java Streams** and **Lambdas** to optimize backend data transformations and reduce code complexity.
- Participated in **performance tuning** and **production issue diagnosis**, analyzing logs, thread dumps, and runtime metrics.
- Integrated backend services with **messaging systems** to enable asynchronous and decoupled processing.
- Developed **JUnit-based unit tests** to validate backend business logic and improve release confidence.
- Designed and optimized **relational database schemas** and **SQL queries** for performance and reliability.
- Supported containerized backend services using **Docker**, with exposure to Kubernetes-based deployments.
- Assisted in backend enhancements aligned with regulatory, audit, and security requirements.
- I participated in debugging production bottlenecks and tuning backend performance. I worked in Agile teams, participating in sprint planning, backlog refinement, and code reviews.

DXC Technologies, Dallas, TX

Feb 2022 – Jul 2022

Full Stack Developer

- Designed and developed **enterprise full stack applications** using Java, Spring Boot, and REST APIs, contributing to both backend service implementation and frontend integration layers.
- Implemented robust **backend business logic** using core Java concepts including Collections, Exception handling, Streams, Lambdas, and multithreading.

- Developed and integrated **RESTful APIs** consumed by frontend components, ensuring secure data exchange and reliable response handling.
- Contributed to **frontend development and integration**, supporting responsive UI behavior and seamless interaction with backend services.
- Assisted in **modernization of legacy applications**, refactoring backend code and improving frontend-backend communication.
- Implemented **asynchronous processing mechanisms** using Java concurrency utilities to support background jobs and non-blocking operations.
- Worked extensively with **relational databases**, designing schemas and optimizing SQL queries.
- Developed **JUnit-based unit tests** to validate backend logic and reduce regression issues.
- Utilized **Maven** for building automation and dependency management.
- Actively used **Git** for source control, including branching, code reviews, and merge conflict resolution.
- Supported **end-to-end testing** and **troubleshooting** across frontend, backend, and database layers.
- Gained exposure to **containerized application environments** and deployment workflows.
- Gained hands-on experience with cloud deployments and backend performance optimization, contributing to improved system reliability and scalability in enterprise environments.

Value Labs, India

Sep 2020 – Aug 2021

Junior Java Developer

- Developed **Java-based backend modules** using Spring framework under guidance from senior engineers.
- Assisted in implementing **RESTful APIs** to enable communication between backend services and external systems.
- Applied **core Java concepts** include Collections, Exception handling, and basic multithreading.
- Supported development of **service-layer** and **business logic code** following clean coding practices.
- Worked with **relational databases**, writing SQL queries and assisting with schema design.
- Implemented **JUnit-based unit tests** to validate backend functionality.
- Supported **basic asynchronous processing** using Java threading concepts.
- Used **Git** for source control and collaborative development.
- Assisted in **debugging** and **issue resolution** during development and testing phases.
- Built a strong foundation in **enterprise Java backend development** and **Agile workflows**.

EDUCATION

- Master's in Computer Science – Wichita State University, KS, USA
- Bachelor's in Computer Science – Sathyabama Institute of Science and Technology, India
